

MTM – Sterling Robotics.

MTM is an engineering firm specializing in the design & manufacture of complex assemblies. We are T1 suppliers and export to major automotive companies in China, Mexico, Canada & the USA.

Besides our high-end engineering technical capabilities and superior quality, a reason on why we are largely competitive on the global scene is our successful automation program. We have partnered with local robotic and automation companies, and have successfully designed, engineered, and implemented cost competitive solutions.

Sterling Robotics, that is headed by Bijy Kurian, is one of these companies. MTM and Sterling have worked together for over 10 years in implementing high end technical automation solutions that work. The technical after sales support that we have got and continue to get from Bijy, and his team is unparalleled and as a result, MTM will continue to do business with them.

MTM is currently in a development phase with a major OE and this development phase will see us purchase multiple automated cells from Sterling Robotics over the next 2 years. Our partnership which has resulted in trust over these years is the reason on why MTM will continue to work with Sterling Robotics.
